

# CPT\_S 540 Homework 8

## Chenrui Xu

### Question 1

$$P(\text{Uniform} = \text{crimson}) = 0.18 + 0.08 + 0.05 + 0.06 + 0.07 + 0.08 = 0.52$$

$$P(\text{Uniform} = \text{gray}) = 0.08 + 0.10 + 0.09 + 0.08 + 0.09 + 0.04 = 0.48$$

$$P(\text{Weather} = \text{clear}) = 0.18 + 0.08 + 0.06 + 0.08 = 0.40$$

$$P(\text{Weather} = \text{cloudy}) = 0.08 + 0.10 + 0.07 + 0.09 = 0.34$$

$$P(\text{Weather} = \text{rainy}) = 0.05 + 0.09 + 0.08 + 0.04 = 0.26$$

$$\begin{aligned} & P(\text{win}|\text{Uniform} = \text{crimson}, \text{Weather} = \text{clear}) \\ &= a < P(\text{win} = T|\text{Uniform} = \text{crimson}, \text{Weather} = \text{clear}), P(\text{win} = F|\text{Uniform} \\ & \quad = \text{crimson}, \text{Weather} = \text{clear}) > \\ &= a < P(\text{win} = T, \text{Uniform} = \text{crimson}, \text{Weather} = \text{clear}) / (P(\text{Uniform} \\ & \quad = \text{crimson}, \text{Weather} = \text{clear})), P(\text{win} = F, \text{Uniform} = \text{crimson}, \text{Weather} \\ & \quad = \text{clear}) / (P(\text{Uniform} = \text{crimson}, \text{Weather} = \text{clear})) > \\ &= a < 0.18 / (0.52 * 0.4), 0.06 / (0.52 * 0.4) > = a < 0.865, 0.288 > = < 0.75, 0.25 > \end{aligned}$$

$$\begin{aligned} & P(\text{win}|\text{Uniform} = \text{gray}, \text{Weather} = \text{clear}) \\ &= a < P(\text{win} = T|\text{Uniform} = \text{gray}, \text{Weather} = \text{clear}), P(\text{win} = F|\text{Uniform} \\ & \quad = \text{gray}, \text{Weather} = \text{clear}) > \\ &= a < P(\text{win} = T, \text{Uniform} = \text{gray}, \text{Weather} = \text{clear}) / (P(\text{Uniform} = \text{gray}, \text{Weather} \\ & \quad = \text{clear})), P(\text{win} = F, \text{Uniform} = \text{gray}, \text{Weather} = \text{clear}) / (P(\text{Uniform} \\ & \quad = \text{gray}, \text{Weather} = \text{clear})) > \\ &= a < 0.08 / (0.48 * 0.4), 0.08 / (0.48 * 0.4) > = a < 0.42, 0.42 > = < 0.5, 0.5 > \end{aligned}$$

$$\begin{aligned} & P(\text{win}|\text{Uniform} = \text{crimson}, \text{Weather} = \text{cloudy}) \\ &= a < P(\text{win} = T|\text{Uniform} = \text{crimson}, \text{Weather} = \text{cloudy}), P(\text{win} = F|\text{Uniform} \\ & \quad = \text{crimson}, \text{Weather} = \text{cloudy}) > \\ &= a < P(\text{win} = T, \text{Uniform} = \text{crimson}, \text{Weather} = \text{cloudy}) / (P(\text{Uniform} \\ & \quad = \text{crimson}, \text{Weather} = \text{cloudy})), P(\text{win} = F, \text{Uniform} \\ & \quad = \text{crimson}, \text{Weather} = \text{cloudy}) / (P(\text{Uniform} = \text{crimson}, \text{Weather} \\ & \quad = \text{cloudy})) > \\ &= a < 0.08 / (0.52 * 0.34), 0.07 / (0.52 * 0.34) > = a < 0.45, 0.4 > = < 0.53, 0.47 > \end{aligned}$$

$$\begin{aligned} & P(\text{win}|\text{Uniform} = \text{gray}, \text{Weather} = \text{cloudy}) \\ &= a < P(\text{win} = T|\text{Uniform} = \text{gray}, \text{Weather} = \text{cloudy}), P(\text{win} = F|\text{Uniform} \\ & \quad = \text{gray}, \text{Weather} = \text{cloudy}) > \\ &= a < P(\text{win} = T, \text{Uniform} = \text{gray}, \text{Weather} = \text{cloudy}) / (P(\text{Uniform} = \text{gray}, \text{Weather} \\ & \quad = \text{cloudy})), P(\text{win} = F, \text{Uniform} = \text{gray}, \text{Weather} \\ & \quad = \text{cloudy}) / (P(\text{Uniform} = \text{gray}, \text{Weather} = \text{cloudy})) > \\ &= a < 0.1 / (0.48 * 0.34), 0.09 / (0.48 * 0.34) > = a < 0.61, 0.55 > = < 0.53, 0.47 > \end{aligned}$$

$$P(\text{win}|\text{Uniform} = \text{crimson}, \text{Weather} = \text{rainy})$$

$$\begin{aligned}
&= a < P(\text{win} = T | \text{Uniform} = \text{crimson}, \text{Weather} = \text{rainy}), P(\text{win} = F | \text{Uniform} \\
&\quad = \text{crimson}, \text{Weather} = \text{rainy}) > \\
&= a < P(\text{win} = T, \text{Uniform} = \text{crimson}, \text{Weather} = \text{rainy}) / (P(\text{Uniform} \\
&\quad = \text{crimson}, \text{Weather} = \text{rainy})), P(\text{win} = F, \text{Uniform} = \text{crimson}, \text{Weather} \\
&\quad = \text{rainy}) / (P(\text{Uniform} = \text{crimson}, \text{Weather} = \text{rainy})) > \\
&= a < 0.05 / (0.52 * 0.26), 0.08 / (0.52 * 0.26) > = a < 0.37, 0.59 > = < 0.39, 0.61 >
\end{aligned}$$

$$\begin{aligned}

## Question 2

(a)

$$\begin{aligned}
&P(\text{Uniform} = \text{Crimson}, \text{Weather} = \text{clear}, \text{win} = T, \text{CallFriend} = T, \text{Buyjersey} = T) \\
&= P(\text{Uniform} = \text{Crimson}) * P(\text{Weather} = \text{clear}) \\
&\quad * P(\text{Win} = T | \text{Uniform} = \text{Crimson}, \text{Weather} = \text{clear}) \\
&\quad * P(\text{CallFriend} = T | \text{Win} = T) * P(\text{Buyjersey} = T | \text{Win} = T) \\
&= 0.6 * 0.3 * 0.9 * 0.7 * 0.6 = 0.06804
\end{aligned}$$

(b) CF=CallFriend

U=Uniform

BJ=BuyJersey

W=Weather

T/F=True/False

$$\begin{aligned} P(CF = T | U = gray, W = cloudy) &= \alpha P(U = gray, W = cloudy, CF = T) \\ &= \alpha \sum_{win} P(U = gray, W = cloudy, CF = T, win) = \alpha P(U \\ &= gray) * P(W = cloudy) * < P(win = T | U = gray, W = cloudy) \\ &* P(CF = T | win = T) + \\ &(P(win = F | U = gray, W = cloudy) * P(CF = T | win = F), \\ &(P(win = T | U = gray, W = cloudy) * P(CF = F | win = T) + \\ &(P(win = F | U = gray, W = cloudy) * P(CF = F | win = F) > \\ &= \alpha * 0.4 * 0.4 * [0.7 * 0.4 + 0.6 * 0.2, 0.3 * 0.4 + 0.6 * 0.8] = 0.16 * \alpha < 0.4, 0.6 > \\ &= < 0.4, 0.6 > \end{aligned}$$

(c)

$$\begin{aligned} P(U = cri | CF = T, BJ = T) &= \alpha P(U = cri, CF = T, BJ = T) \\ &= \alpha \sum_{weather} \sum_{win} P(CF = T, BJ = T, W, Win) = \alpha * P(Uniform \\ &= crimson) \sum_{win} [P(win, CF = T, BJ = T) * P(weather = clear) + \\ &\sum_{win} P(win, CF = T, BJ = T) * P(weather = cloudy) + \\ &\sum_{win} P(win, CF = T, BJ = T) * P(weather = rainy)] \end{aligned}$$

$$\begin{aligned}
&= \alpha * P(\text{Uniform} = \text{crimson}) \\
&< [P(\text{win} = T | \text{Uniform} = \text{crimson}, \text{weather} = \text{clear}) * P(\text{CF} = T | \text{win} = T) \\
&* P(\text{BJ} = T | \text{win} = T) * P(\text{weather} = \text{clear}) \\
&+ P(\text{win} = T | \text{Uniform} = \text{crimson}, \text{weather} = \text{cloudy}) \\
&* P(\text{CF} = T | \text{win} = T) * P(\text{BJ} = T | \text{win} = T) * P(\text{weather} = \text{cloudy}) \\
&+ P(\text{win} = T | \text{Uniform} = \text{crimson}, \text{weather} = \text{rainy}) * P(\text{CF} = T | \text{win} = T) \\
&* P(\text{BJ} = T | \text{win} = T) * P(\text{weather} = \text{rainy}) \\
&+ P(\text{win} = F | \text{Uniform} = \text{crimson}, \text{weather} = \text{clear}) * P(\text{CF} = T | \text{win} = F) \\
&* P(\text{BJ} = T | \text{win} = F) * P(\text{weather} = \text{clear}) \\
&+ P(\text{win} = F | \text{Uniform} = \text{crimson}, \text{weather} = \text{cloudy}) \\
&* P(\text{CF} = T | \text{win} = F) * P(\text{BJ} = T | \text{win} = F) * P(\text{weather} = \text{cloudy}) \\
&+ P(\text{win} = F | \text{Uniform} = \text{crimson}, \text{weather} = \text{rainy}) * P(\text{CF} = T | \text{win} = F) \\
&* P(\text{BJ} = T | \text{win} = F) \\
&* P(\text{weather} = \text{rainy})], [P(\text{win} = T | \text{Uniform} = \text{crimson}, \text{weather} = \text{clear}) \\
&* P(\text{CF} = T | \text{win} = T) * P(\text{BJ} = T | \text{win} = T) * P(\text{weather} = \text{clear}) \\
&+ P(\text{win} = T | \text{Uniform} = \text{crimson}, \text{weather} = \text{cloudy}) \\
&* P(\text{CF} = T | \text{win} = T) * P(\text{BJ} = T | \text{win} = T) * P(\text{weather} = \text{cloudy}) \\
&+ P(\text{win} = T | \text{Uniform} = \text{crimson}, \text{weather} = \text{rainy}) * P(\text{CF} = T | \text{win} = T) \\
&* P(\text{BJ} = T | \text{win} = T) * P(\text{weather} = \text{rainy}) \\
&+ P(\text{win} = F | \text{Uniform} = \text{crimson}, \text{weather} = \text{clear}) * P(\text{CF} = T | \text{win} = F) \\

&+ P(\text{win} = F | \text{Uniform} = \text{crimson}, \text{weather} = \text{cloudy}) \\
&* P(\text{CF} = T | \text{win} = F) * P(\text{BJ} = T | \text{win} = F) * P(\text{weather} = \text{cloudy}) \\
&+ P(\text{win} = F | \text{Uniform} = \text{crimson}, \text{weather} = \text{rainy}) * P(\text{CF} = T | \text{win} = F) \\
&* P(\text{BJ} = T | \text{win} = F) * P(\text{weather} = \text{rainy})] >
\end{aligned}$$

$$\begin{aligned}
&= \alpha^* \\
&< 0.6 * 0.3 * 0.9 * 0.7 * 0.6 + \\
&0.6 * 0.4 * 0.6 * 0.7 * 0.6 + \\
&0.6 * 0.3 * 0.4 * 0.6 * 0.7 + \\
&0.6 * 0.3 * 0.1 * 0.2 * 0.3 + \\
&0.6 * 0.4 * 0.4 * 0.2 * 0.3 + \\
&0.6 * 0.3 * 0.6 * 0.2 * 0.3, \\
&0.4 * 0.3 * 0.2 * 0.6 * 0.7 + \\
&0.4 * 0.4 * 0.4 * 0.6 * 0.7 + \\
&0.4 * 0.3 * 0.7 * 0.6 * 0.7 + \\
&0.4 * 0.3 * 0.8 * 0.2 * 0.3 + \\
&0.4 * 0.4 * 0.6 * 0.2 * 0.3 + \\
&0.4 * 0.3 * 0.3 * 0.2 * 0.3 > \\
&= \alpha^* < 0.17208, 0.08592 > \\
&= < 0.67, 0.33 >
\end{aligned}$$

### Question 3

$P(U = \text{crimson}) > P(U = \text{gray})$ , so choose  $P(U = \text{crimson}) = 0.6$

$P(W = \text{cloudy}) > P(W = \text{clear}) > P(W = \text{rainy})$  so choose  $P(W = \text{cloudy}) = 0.4$

Based on these two, choose, we choose win, so  $P(\text{win} = T | U = \text{crimson}, W = \text{cloudy}) = 0.6$

Given  $\text{win} = T$ , We choose corresponding max probability:  $P(CF = T)$  and  $P(BJ = T)$

So we will have:

$$\begin{aligned} P(U = \text{crimson}, W = \text{cloudy}, \text{win} = T, CF = T, BJ = T) &= 0.6 * 0.4 * 0.6 * 0.7 * 0.6 \\ &= 0.06048 \end{aligned}$$

### Question 4

If they are independent, we will have  $P(U) * P(W) = P(U \text{ and } W)$

We pick one example:

$$\begin{aligned} P(U \text{ and } W) &= P(\text{win} = T | U = \text{crimson}, W = \text{cloudy}) + P(\text{win} = F | U = \text{crimson}, W \\ &= \text{cloudy}) \end{aligned}$$

$$= 0.08 + 0.07 = 0.15$$

$$P(U = \text{crimson}, W = \text{cloudy}) = 0.52 * 0.34 = 0.1768$$

They are different, so they are not independent and information is not consistency.
